Cybersecurity Compliance Readiness

ARE YOU MANAGING CYBERSECURITY COMPLIANCE REQUIREMENTS OR ARE THEY MANAGING YOU?

Is your organization's cybersecurity (privacy & security) compliance program ready for an audit? From our experience, 50-70 percent of the clients we engage believe they are ready, when in reality, they aren't. Discovering gaps or deficiencies during compliance testing is costly and unproductive. Regardless of the quality of your audit and assurance provider, they are engaged to discover and document gaps, not fix them.

Aprio's Business Technology Consulting Services team provides comprehensive, cost-effective compliance readiness solutions that will prepare your organization for assurance reporting by thoroughly identifying and documenting criteria evidence and process approval workflows.

Get it right the first time

Aprio can help your team get it right the first time, while making sustainable information risk management easier to achieve. As risk experts, our proven framework and numerous templates can help your organization establish:

- Governance, risk & compliance ("GRC") readiness
- Integrated risk management and threat detection
- Data security monitoring and controls
- Process improvements and automated workflow
- Proper documentation and versioning controls
- Threat and intrusion communication plans

Simplify compliance testing and reporting

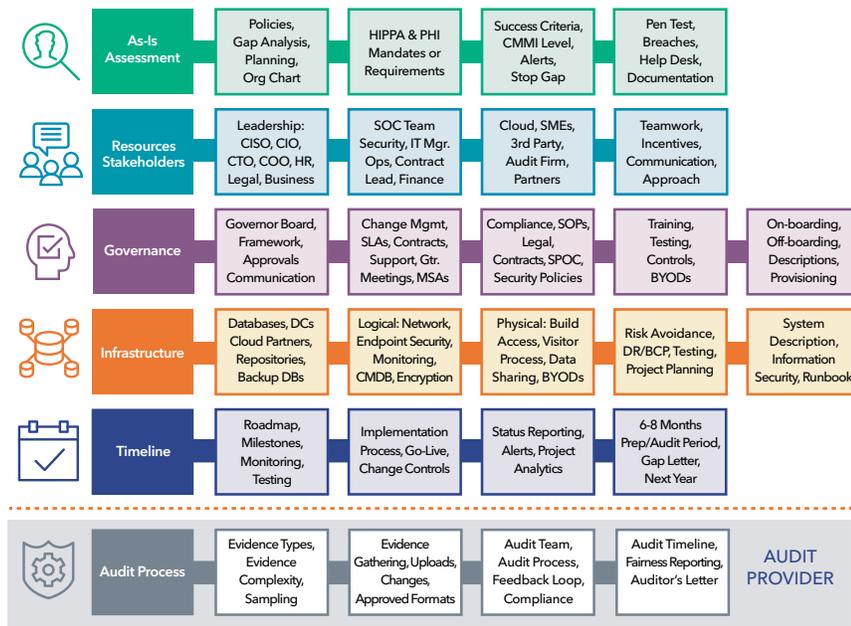

The compliance demands of clients, trading partners and regulators can place you and your business under great stress. Multiple attestation requirements heaped on top of daily business as usual responsibilities can burn your security and compliance people out. Aprio's team of former CISOs and security experts have deep experience harmonizing requirements to ensure you are properly protecting your data and can produce proper evidence for auditors to prove you meet compliance criteria.

50-70 percent of the clients we engage are not ready for audit. Discovering gaps before compliance testing avoids costly and unproductive activities.

Aprio's GRC readiness framework for ISO, SOC or HITRUST

We help you achieve compliance readiness with minimal business disruption, while protecting your internal team from audit fatigue. From applying critical controls to minimize the risk of HIPPA, PHI or PII data breaches, to designing and implementing processes and procedures for ISO, SOC and HITRUST data security regulations, Aprio applies proven frameworks to make sure you are compliance ready.

Move beyond compliance to achieving risk avoidance

Even in today's high-alert cyber threat landscape, many businesses still approach compliance reporting as a "check-the-box" workshop exercise. We work with clients who believe true risk management is a best practice approach that should be embraced throughout the enterprise. From intrusion detection programs or securing your organization from cyber threats, to analyzing and addressing standard principles of risk management, or defining controls and governance, we can craft a solution that meets your compliance timeline and expectations.

At Aprio we view compliance readiness as an opportunity to improve the operational integrity of your business that allows your enterprise to scale as it grows and becomes more complex. Our goal is to move your organization up the maturity scale to streamline your yearly compliance testing and reporting.
